February  
2024

## Fund objective

The Fund's investment objective is to provide capital growth, to outperform and decrease in volatility with respect the crypto currency Bitcoin over the medium to long term. The strategy is based on an in & out trading activity that operates rigorously following the signals that arrive from a trading algorithm. The strategy itself is the result of an empirical analysis of the underlying observation over a period of 5 years. The fund is Eur based currency, it will not use derivatives, and it will not perform leveraged investments.

## Fund performance

	Fund Performance	Bitcoin Performance	Extra Performance	Fund Ann. Volatility	Bitcoin Ann. Volatility	Volatility Delta

## Fund moves

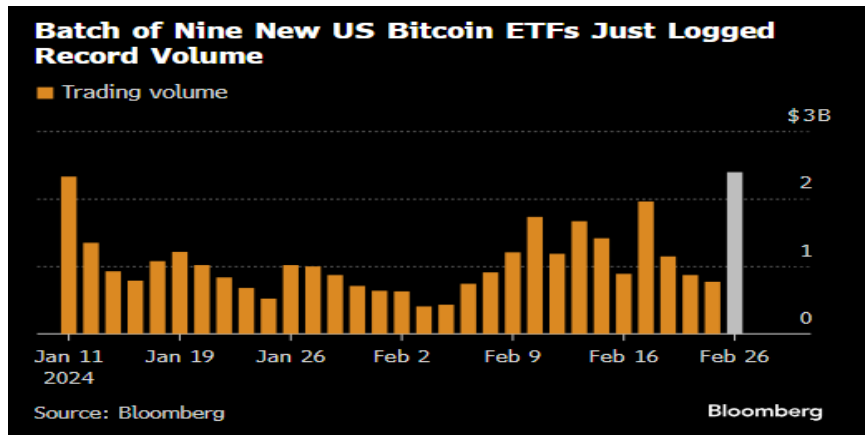

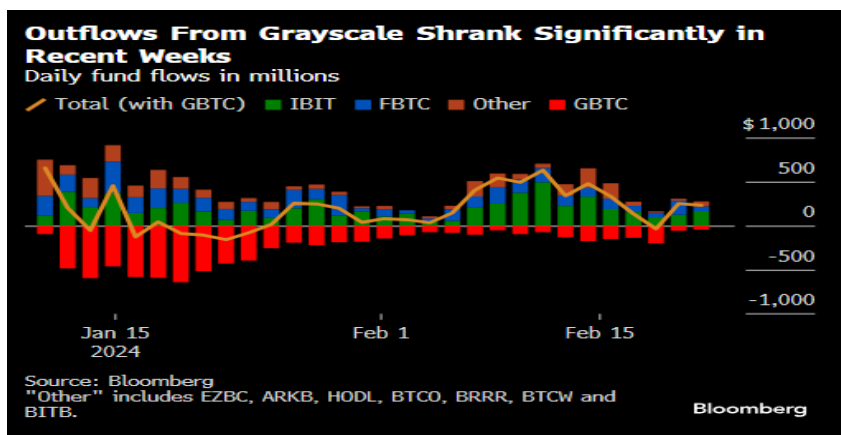

February opens in long mode. The momentum remains positive, two factors in particular push the price upwards: the purchase flows of the new ETFs and the upcoming halving expected for April 2024.

In the first week, the non-positive macroeconomic news and the disinvestment flows linked to Greyscale, generate a slight correction. Subsequently, the net investment flows linked to ETFs are so significant to generate a strong price increase.

In fact, from the 24th a "bull run" starts which leads Bitcoin to gradually break new highs until it reaches 59,000.

The purchase flows follow one another, and the new ETFs give easy access to a very large audience of new investors. Flows on crypto platforms are slumping while purchases of ETFs are gradually increasing.

The result is a strong acceleration of upward pressures with prices growing very rapidly.

On the 15th Bitcoin exceeds 49,000 Eur. The following week a new temporary correction pushes the price to the 46'600 Eur area. In this case too, the algorithm considers the decline to be temporary and maintains the long position.

The month ends in long mode with Bitcoin at 56'377.39 Eur which marks a monthly increase of 39.91%. Algebra follows closely with a monthly performance of 39.68% and an overall performance since inception of 137.81%.
