Fund objective

The Fund's investment objective is to provide capital growth, to outperform and decrease in volatility with respect the crypto currency Bitcoin over the medium to long term. The strategy is based on an in & out trading activity that operates rigorously following the signals that arrive from a trading algorithm. The strategy itself is the result of an empirical analysis of the underlying observation over a period of 5 years. The fund is Eur based currency, it will not use derivatives, and it will not perform leveraged investments.

Fund moves

The month opens with the fund in long mode. The first two days witness a strong correction which leads Bitcoin to touch the critical threshold of 53,000 Eur several times. The main ETF funds on physical Bitcoin undergo strong redemptions and are listed at discounts compared to the net asset value, a sign of a strong pressure on the underlying asset.

The FED announces that it is highly likely that it will not raise interest rates. Furthermore, data on US unemployment are worse than expected and the possibility of a rate cut is also starting to appear. The markets react positively. The correction is then reabsorbed in the following days, on Monday the 6th the price returns to the 60,000 Eur area, the funds begin to quote at a premium again. Subsequently, up to the 14th, there is a lateral movement which regains strength after the 15th, reaching almost 66,000 Eur on the 21st thanks to the good expectations on the financial markets.

However, the hype on the ETFs are no longer as consistent as in the first months and after several days of inflows there is a profit taking with net outflows from the ETFs and discounted prices. In general, the month shows smaller fluctuations than usual with reduced volatility. Particularly during weekends when institutional players are at a standstill, the price of Bitcoin remains mostly static. In the meantime the process of normalization and institutionalization of cryptocurrencies is proceeding at a rapid pace. Investments in ETFs are opened to large listed corporations,

they are opened to Asian markets too and London is working on the listing of its own ETFs on the main cryptocurrencies. In the US, applications for the listing of ETFs on Ethereum are submitted and the approval process proceeds.

iShares Bitcoin ETF Price, NAV and Net Inflows. Source: Bloomberg

The long-term picture is therefore bullish and the Fund's position remains long except for a rapid profit-taking that allows to exit and re-enter quickly with a profit. Bitcoin closes at 62'346.75 Eur with a monthly performance of 10.41%. The fund closes the month at +10.97% with a monthly overperformance of +0.57%.

Risk Considerations

An investment in the Fund involves certain risk factors and considerations relating to the Fund's structure and investment objective that prospective investors should evaluate before making a decision to subscribe for Shares. No assurance can be given that the Fund will succeed in meeting its investment objective. Moreover, past performance is not a guarantee of future results. The risks referred to in the Fund's issuing document are neither specific nor exhaustive, and a financial advisor or other appropriate professional should be consulted for additional advice.
