Fund objective

The Fund’s investment objective is to provide capital growth, to outperform and decrease in volatility with respect the crypto currency Bitcoin over the medium to long term. The strategy is based on an in & out trading activity that operates rigorously following the signals that arrive from a trading algorithm. The strategy itself is the result of an empirical analysis of the underlying observation over a period of 5 years. The fund is Eur based currency, it will not use derivatives, and it will not perform leveraged investments.

Fund performance vs Bitcoin Eur

Fund Performance vs Bitcoin. Source: Internal elaboration

Bitcoin daily bars

Source: Bloomberg graph of Bitcoin/Eur BGNL daily data.

Fund moves

August 2025 began in a risk-free mode, with Bitcoin opening the month at 103'721Eur (118'470 Usd). During the first half of the month, market sentiment progressively strengthened, driven by U.S. macroeconomic data that fueled hopes for an end to the "Wait and See" policy of Federal Reserve Chairman Jerome Powell. As a result, markets anticipated possible interest rate cuts at the upcoming FOMC meetings, starting in September. However, some uncertainty remained regarding the impact of Trump's import tariffs on inflation and the risks of supply chain shortages.

Bitcoin Price and Onchain Data

Onchain data indicated a steady increase in the Short-Term Holder Realized Price, which stabilized around the 106'000 Usd level. An upward trend in holders' realized prices typically signals the early phase of a medium-term bullish expansion. Rumors resurfaced about the U.S. government's potential creation of an institutional Bitcoin fund, fueled by statements from Trump. There was also speculation about a Federal Reserve plan to revalue gold reserves, which some suggest could unlock capital to be reinvested in crypto. While these remain residual hypotheses, they were sufficient to push Bitcoin higher, reaching its monthly peak on August 14 at 124'500 Usd (106'700 Eur).

Correction and Geopolitical Risks

From the following day, Bitcoin began to retrace, driven by renewed macroeconomic doubts around forthcoming rate cuts and fears stemming from worsening geopolitical conditions. The resolution of the Russo Ukrainian and Israeli Palestinian conflicts still appeared distant, further aggravating market uncertainty. This correction continued until the end of the month, with Bitcoin closing at 92'290 Eur. The fund resumed its position on August 26, entering at a lower level than its previous exit.

Monthly Performance

August 2025 saw Bitcoin reach new highs and demonstrate resilience, driven by favorable institutional flows and macroeconomic expectations. The interplay of central bank policy, economic data, and global tensions was pivotal in shaping cross-market price action. The fund posted a monthly performance of -2.57%, compared to Bitcoin's -11.02%, achieving an extra monthly performance of 8.45%.

Risk Considerations

An investment in the Fund involves certain risk factors and considerations relating to the Fund’s structure and investment objective that prospective investors should evaluate before making a decision to subscribe for Shares. No assurance can be given that the Fund will succeed in meeting its investment objective. Moreover, past performance is not a guarantee of future results. The risks referred to in the Fund’s issuing document are neither specific nor exhaustive, and a financial advisor or other appropriate professional should be consulted for additional advice.
